GROUND-FAULT PROTECTION – UNGROUNDED AC SYSTEMS

PGR-3100 Series Ground-Fault Indication System

Simplified Circuit Diagram

Ordering Information

ORDERING NUMBER	MOUNTING
PGR-3100	Panel mount

Description

The PGR-3100 indicates the presence of voltage on each phase of a three-phase system. The LEDs on the panel illuminate when voltage is present. When a ground-fault occurs, the voltage on the faulted phase reduces to ground potential, causing the LEDs for the faulted phase to dim and the LEDs for the unfaulted phases to become brighter. Ungrounded ac systems are required by the National Electrical Code (NEC®) Article 250.21(B) and the Canadian Electrical Code Part 1, Section 10-106 (2) to have ground detectors, such as the PGR-3100, installed on the system. External potential transformers (PTs) can be used to step down system voltage, allowing the PGR-3100 to be applied to any system voltage. PTs are not required for system voltages up to 600 V ac.

Features & Benefits

FEATURES	BENEFITS
NEC® and CE Code compliant	Meets National Electrical Code (NEC) Article 250.21(B) and Canadian Electrical Code Part 1, Section 10-106 (2) requirements for ungrounded systems
Phase LEDs	Indicates presence of a ground fault and the faulted phase as well as phase-to-ground voltage on an energized bus
Redundant LEDs	Redundant long-life LEDs (two per phase) to ensure reliability
Lamp test button	Verifies LEDs are operating

Specifications

Input Voltage	Up to 600 V ac 50/60 Hz
Indicator Off Voltage	< 30 V ac line to ground
Dimensions	H 88.9 mm (3.5"); W 108 mm (4.3"); D 54 mm (2.1")
Test Button	Local
Approvals	CSA certified, UL Listed
Conformally Coated	Standard feature
Warranty	5 years
Mounting	Panel
