**Schematic Symbol**

**Description**

This SJxx20xx high temperature SCR series is ideal for uni-directional switch applications such as phase control in heating, motor speed controls, converters/rectifiers and inrush current controllers.

These SCRs have a low gate current trigger level of 6 mA, 10 mA or 35 mA maximum at approximately 1.5 V.

**Features & Benefits**

- Halogen free and RoHS compliant
- 150°C maximum junction temperature
- Surge capability up to 300A at 60 Hz half cycle
- Recognized to UL 1557 as an Electrically Isolated Semiconductor Device

**Applications**

Typical applications are capacitive discharge systems for strobe lights, nailers, staplers and gas engine ignition. Additional applications include various AC to DC applications, low power AC motor and controls for power tools, home/brown goods and white goods appliances.

Internally constructed isolated packages are offered for ease of heat sinking with high isolation voltage.

### Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including  $dv/dt$ ), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
