Littelfuse: Everywhere, Every Day

Founded in 1927, Littelfuse has become the world’s most respected circuit protection brand, with well-established and growing platforms in power control and sensing technologies. Today, we are a global company, offering a diverse and extensive product portfolio—fuses, semiconductors, polymers, ceramics, relays, sensors, and more—serving the electronics, automotive, and industrial markets. Each is manufactured to exacting quality standards and backed by an unwavering commitment to technical support and customer service.

Our history of innovation, combined with our customer-first culture, drives us to collaborate with you to develop safer, more reliable products that are energy efficient and compliant with global regulations. We will partner with you to solve complex problems wherever electrical energy is used, bringing design, engineering, and technical expertise to deliver business results.

Why Choose Littelfuse

Littelfuse is the global leader in circuit protection solutions. We are the only company to offer all of the pertinent circuit protection technologies, with products that can be used in virtually everything that uses electrical energy. Complementing our wide portfolio of circuit protection products is a global network of design and technical support expertise. We offer decades of design experience to help you address application challenges and achieve regulatory compliance.

Your Single Source

Littelfuse offers an extensive circuit protection product line. We design forward-thinking, application-specific solutions to provide assurance that your most demanding requirements will be met. Our goal is to provide the most complete range of options so that you will not have to compromise.

Testing Support

Littelfuse can help ensure that your products will withstand most common threats repeatedly and will fail safely under extreme circumstances. We can serve as an independent source to provide assistance as you design by offering lab testing capabilities for customer applications. This testing includes industry-specific required power fault and Electrostatic Discharge (ESD) / Electrically Fast Transients (EFT) / lightning surge conditions.

Application Knowledge

For over 95 years, Littelfuse has maintained a focus on circuit protection, and we will continue to adapt as technologies evolve. Engineers and circuit designers around the world have come to rely on Littelfuse products and application knowledge to support their designs.

Global Support

Littelfuse stays close to customers. With manufacturing, lab, and design facilities located around the globe, application knowledge and technical support are locally available. Also, we offer a network of regional customer support offices and hundreds of independent authorized distributor contacts to assist you. Visit [Littelfuse.com/contact-us](https://www.littelfuse.com/contact-us) to find local support near you.

Standards Compliance Expertise

Most Littelfuse products comply with a wide range of applicable industry and government guidelines as well as our own rigorous quality and reliability criteria. We continually look forward and adapt to changing requirements so that our products will comply with industry- specific national and international standards, such as CCC, CSA, IEC, IEEE, ISO, ITU, Meti, RoHS, Telcordia, TIA, and many more.

Operational Excellence

With our global manufacturing footprint, Littelfuse is firmly committed to manufacturing quality products at a competitive price. We build quality into our products and services, striving for zero defects in everything we do, thereby reducing cost and increasing your total satisfaction. We strive to exceed expectations every day.

Quality Assurance

Our global manufacturing facilities abide by strict quality assurance requirements and hold the following quality management system registrations:

- ISO 9001
- ISO14001
- IATF 16949

About this guide

Littelfuse designs, manufactures, and markets a wide variety of semiconductor devices and is a major provider of optically isolated electronic components.

Littelfuse provides a unique mix of high voltage wafer fabrication, isolation barrier expertise, multi-chip packaging experience, and expertise in analog, mixed signal, and power design, points the way to greater functionality in a smaller footprint at lower cost for your designs.

Solid-state Relays

Solid state relays by Littelfuse is one of the broadest in the industry. The devices use discrete semiconductor components and the patented OptoMOS® architecture to deliver fast, reliable, bounce-free switching in a compact design. Semiconductor relays are an ideal replacement for larger reed and electromechanical relays. Compared to these old electromagnetic technologies, our OptoMOS® relays offer significantly lower drive current, small package size, no susceptibility to magnetic interaction, and solid state reliability. All of these are key requirements for the design of today's complex, low-power, multi-channel products.

Features

- Low drive current
- High reliability
- No EMI/RFI generation
- Arc-free with no snubbing circuits
- AC or DC switching
- Current limiting devices available
- Low off-state leakage

Applications

- Telecommunications / data communications
- Instrumentation
- Multiplexers
- Data acquisition / electronic switching
- Meters (watt-hour, water, gas)
- Medical equipment (patient/equipment isolation)
- Security
- Industrial controls

Output Configurations

Type BI relays conduct load current in both directions.

Type BI+ relays, in BI configuration, conduct load current in both directions.

Type UNI relays conduct load current from the positive terminal to the negative terminals only

Type BI+ relays, in UNI configuration with output MOSFET wired in parallel, enable higher load current from positive terminal to negative terminal only.

The accompanying SSR tables reference these types (BI, BI+, & UNI) for all devices listed.

Current Limiting SSRs with Voltage Triggered Shutdown & Thermal Management

All of the Fault-Protected Solid-state Relays (SSR) listed below feature active current limiting and Thermal Management, while the CPC1540, CPC1563, and CPC1593 additionally feature Voltage-Triggered Shutdown, or VTS.

Fault-Protected SSRs can directly replace footprint-compatible standard SSRs in existing designs to improve end-product survivability.

These Fault-Protected relays resume normal operation upon removal of the fault condition or upon cycling the input control current. Should the fault condition repeat or persist, the fault protection will immediately resume.

Active Current Limiting: All Fault-Protected SSRs limit load current to protect both the load and the SSR.

Voltage Triggered Shutdown: CPC1540, CPC1563, and CPC1593 incorporate a third protection feature called Voltage-Triggered Shutdown (VTS).

During a current limiting event, this advanced thermal management protection feature reduces the relay current to <100 μA whenever the voltage drop across the relay exceeds a non-adjustable predetermined threshold, thereby preventing excessive heating of the SSR.

Thermal Management: All Fault-Protected relays include a traditional thermal management feature that deactivates the SSR outputs if the die temperature exceeds a safe limit, regardless of the Active Current Limiting state and, when equipped, the Voltage-Triggered Shutdown state. This feature provides excellent power cross immunity.

Features & Benefits

- Provide excellent power-cross immunity
- Resumes normal operation after fault is removed
- Ideal for use in electromagnetically noisy environments

Applications

- Telephony hook switches
- Electronic switching
- Security
- Industrial controls

CPC2501M

Self-Actuating, Normally Closed, 60 V, 1.84 A Solid-state Relay

The CPC2501M incorporates a normally closed (1-Form-B) solid-state relay switch with an integrated circuit specifically designed to control and manage the relay state based upon the applied voltage.

When configured for video doorbell applications, the CPC2501M becomes a self-actuating solid state relay to provide the ringing chime bypass function necessary to ensure proper video and chime operation. In addition to superior performance over traditional discrete video doorbell applications, the CPC2501M provides reduced BOM costs and printed circuit board real estate demands through integration.

Features & Benefits

- 1-Form-B (Normally closed) relay
- Internal control circuitry
 - Self actuating
 - Fault protection timer
- 600 mΩ Maximum On-resistance at 25 °C
- 60V peak AC or DC load voltage
- Load Current
 - 1.84 A_{RMS} Continuous
 - 5 A Peak
- Fast Turn-on: 170 μs maximum
- Small (6 × 6) mm thermally enhanced QFN package

Applications

- Door chime bypass
 - Derives power from standard 2-wire chime supply.
 - System BOM savings and reduced PCB demands.
- Building Automation
- Internet of Things (IoT)
- Security
- Voltage controlled relay

Application Example: CPC2501M Typical Video Doorbell Application Circuit

Growing concerns about household safety and personal security fuel the popularity of video doorbell monitoring devices worldwide. CPC2501M is a self-actuating Voltage Controlled, Normally Closed, 60 V, 1.84 A_{RMS} Self-actuating Solid-state Relay IC which provides a bypass function to an installed doorbell chime to enable proper video and chime operation with the existing wire infrastructure. It derives its power from the standard 2-wire supply.

Since the CPC2501M is offered in a small (6 × 6) mm, 16-pin QFN package, it enables ultra-compact designs that can be easily integrated into numerous doorbell chimes with minimal design effort.

QFN-16

CPC1601M

Energy Harvesting, Normally Open, 60 V, 2 A Solid-state Latching Relay

The CPC1601M is a non-isolated, low operating current, 1-Form-A solid state latching relay, available in a small 3 × 3 mm² DFN package. The relay can obtain operating power from the open-circuit load or system power supply. If powered from the load, the relay takes zero power from the system supply, thus helping to extend battery life. When power is supplied by the load, the relay opens periodically to obtain power via the open-circuit load voltage. In most applications this interruption is transparent to the load.

Additionally, the CPC1601M provides a power output pin that can supply external circuits with a maximum of 10 mW of power. The CPC1601M can sense whether it is powered by the load or by the system power supply automatically by monitoring the HV_{CC} input pin. The load-powered mode of operation applies to an AC source, such as a 24 V_{AC} transformer secondary voltage.

Galvanic isolation can be achieved with the addition of a few passive components.

Problem/Solution

The CPC1601M is a non-isolated, low operating current, 1-Form-A solid state latching relay. The relay can obtain operating power from the open-circuit load or system power thus helping to extend battery life. The CPC1601M accepts system input supply voltage: 3 V–5.5 V and logic inputs are compatible with standard TTL and CMOS levels and can interface directly with many controlling devices.

The CPC1601M is offered in DFN-8 package on tape and reel.

Features & Benefits

- Small 3 × 3 mm² DFN package
- V_{CCIN}/P_{OUT} pin Input Current < 1 μA
- Single pulse operation On/Off
- Low on-resistance (308 mW typical)
- Load Connect RYL1 / RLY2: 60 VP AC or DC operation
- 2 A continuous load capability AC or DC
- Set/Reset or Toggle operation
- Latching Form-A switch output
- Supply Input Power voltage: 3 V–5.5 V
- Zero current from system power supply when load biased power mode (load-powered) is used
- Load-harvesting power pin for powering external circuitry up to 10 mW
- Zero Cross output load switching in load-powered mode
- No thermostat 'C' lead required
- External Galvanic Isolation capable
- Compatible with 24 Vac Transformers used in HVAC systems
- Can directly be controlled from microcontrollers
- Lower EMI emissions in zero cross load-power mode operation
- Excellent Power Handling Capability 2 Watts

Applications

- Security systems
- Thermostats
- Fire alarm panels
- Electronic switching
- Data acquisition
- Metering
- Industrial controls
- Instrumentation
- Security
- Building automation

What is Direct Copper Bonding (DCB)?

ISOPLUS-264™ and i4-PAC packages utilize DCB ceramic substrates instead of the usual copper lead frame. DCB stands for Direct Copper Bonding and denotes a process in which copper and a ceramic material are fused together, at high temperatures.

The design of these patented packages is revolutionary: The silicon chips are soft soldered onto the DCB ceramic substrate which provides both, high isolation capability of 2500V_{RMS} with an unbeatable low thermal resistance compared to conventional, externally mounted isolation materials.

Optically Isolated AC Power Switches: I_{LOAD} <1 A

The OptoMOS® line of power products uses dual power-SCR outputs to produce an alternative to optocoupler and TRIAC circuits. AC Power Switches provide a blocking voltage of up to 800V_P. In addition, tightly controlled zero-cross circuitry ensures the switching of AC loads while minimizing the generation of transients. The input and output circuits are optically coupled to provide 3750 V_{RMS} of isolation and noise immunity between control and load circuits. Long life and environmental integrity make these power switches ideal for controlling a variety of AC circuits in industrial environments in which electromagnetic interference would disrupt the operation of electromechanical relays.

How is the OptoMOS® AC Power Switch Used Here?

Smart Home

OptoMOS® AC Power Switches are ideal for switching smaller loads in all kind of applications including home automation or smart home. The input and output circuits are optically coupled to provide up to 5000V_{RMS} of galvanic isolation and noise immunity between control and load circuits. The product line includes devices with blocking voltages of up to 800V_{AC} peak.

Long life and environmental integrity make these power switches ideal for controlling a variety of AC load circuits.

CPC7514: 320 V Quad High Voltage Isolated Analog Switch Array

The CPC7514 Quad High Voltage (HV) isolated Analog Switch Array builds upon our Line Card Access Switch (LCAS) design and fabrication expertise for telecom and non-telecom applications. This monolithic solid state device provides the switching functionality of four normally open (1-Form-A) relays in one small economic package. Designed to provide flexible single-ended or differential access to high voltage networks, the CPC7514 high voltage array is configured as two sets of matched paired switches for improved differential performance. Additionally, sensitive differential applications will benefit from the matched pairs’ excellent pair-to-pair isolation. The self-biasing switches do not require external high-voltage supplies for proper operation. Independent switch current limiting and switch-pair thermal shutdown features provide enhanced protection for devices connected to high voltage networks up to +320V.

Features & Benefits

- Provides single-ended or differential access to high voltage networks
- Self-biasing – no external high-voltage supplies required
- Low, matched R_{ON}
- Switch voltage up to $\pm 320V_P$
- 320V logic-input-to-switch output isolation
- 110 dB switch-to-switch isolation at 5 kHz
- Flexible switch configurations
- Smart logic for power-up/hot-plug state control
- 3.3V operation with very low power consumption

Applications:

- Motor Controls / Drives
- Stepper Motor Drives
- DC/DC-Converters
- AC/DC-Inverters
- Robotics
- Cordless Power Tools
- Drones

CPC7514

20-Pin SOIC

CPC7512: 320 V Dual Shunt-Isolated High Voltage High Frequency Analog Switch

The CPC7512 dual 1-Form-A high-voltage, high-frequency, shunt-isolated analog switch builds upon the design and fabrication expertise for industrial applications by Littelfuse. This monolithic solid state device provides the switching functionality of two normally open (1-Form-A) solid state relays for high frequency applications in one small economical package. Both switches incorporate shunt isolation by means of a T-switch compensation technique to minimize series capacitance through the open off-state switches for improved off-state isolation over frequency. Designed to provide flexible single-ended or differential access to high voltage networks, the CPC7512 is functionally configured as two independent logical switches.

The self-biasing switches do not require external high-voltage supplies for proper operation. An integrated thermal shutdown feature provides not only enhanced protection for devices connected to high voltage networks up to +320V, but also an external signal to indicate the device is shut down.

Features & Benefits

- Provides single-ended or differential access to high voltage networks
- Self-biasing: no external high voltage supplies required
- Low, matched R_{ON}
- Guaranteed break-before-make (BBM)
- Switch voltage up to $\pm 320V_P$
- 60 dB off-isolation at 1 MHz
- Smart logic for power-up/hot-plug state control
- 5V operation with very low power consumption
- Thermal shutdown protects against fault conditions
- Latched TTL logic level inputs

Applications:

- Instrumentation
- Industrial controls and monitoring
- Multiplexed ultrasonic transducer switching
- Automatic test equipment (ATE)
- Battery monitoring and charging

Performance Data

20-Pin SOIC

Optically Isolated Load-Biased Gate Drivers

The CPC1580 and CPC1590 devices are MOSFET Gate Drivers that require no external power supply: They regulate the input voltage drawn from the load (up to 65V or 200V, respectively), down to 12.2V for internal use. They are specifically designed for low duty cycle switching applications that drive up to 4 nF of gate capacitance.

The CPC1580 and CPC1590 devices accomplish very fast MOSFET turn-on by supplying stored charge from an external capacitor to the MOSFET gate when LED input control current is applied. After the MOSFET is turned on, photocurrent from the input optocoupler keeps it on for as long as sufficient input control current flows, so there is no low-frequency operating limit. When the MOSFET is turned off, the storage capacitor charges from the device’s regulated internal voltage in preparation for the next turn-on.

Features & Benefits

- No external IC power supply required
- Low drive power requirements (TTL/CMOS compatible)
- Load voltages up to 200V
- Fast switching speeds: 40 μs on; 400 μs off

Applications

- Instrumentation
- Multiplexers
- I/O subsystems
- Meters (Watt-Hour, water, gas)
- Medical equipment (patient / equipment isolation)
- Security
- Industrial controls

Single & Dual Channel Gate Drivers

Littelfuse offers powerful families of ultra-fast Single & Dual Channel Gate Drivers for MOSFETs and IGBTs, with a large mix of logic configurations, packaging, and drive current capabilities. Five of these devices are AEC-Q100 qualified.

Single-output and dual-output low-side driver ICs include selectable options for logic combinations. The range of current ratings offered is the broadest available, extending to 30A peak, which is the LARGEST PEAK DRIVE CURRENT capability for an integrated driver on the market.

In all series devices, internal circuitry eliminates cross conduction and current “shoot-through,” and the driver is virtually immune to latch up.

Features & Benefits

- 1.5A to 30A peak source sink drive current
- Wide operating voltage range up to 35V
- –40 °C to +125 °C extended operating temperature range
- Logic input withstands negative swing of up to –5V
- Dual drivers have matched rise and fall times
- Low propagation delay time

Applications

- Efficient power MOSFET and IGBT switching
- Switch mode power supplies
- Motor controls
- DC-to-DC converters
- Class-D switching amplifiers
- Pulse transformer driver

How is the Gate Driver Used Here?

Off-board EV Charger

High speed Gate Driver ICs are efficiently driving Power-MOSFET or IGBT devices. The gate drivers convert the controller’s PWM signals into gate-signals compatible to Si-/SiC-MOSFETs or IGBTs, providing an optimal power semiconductor control while minimizing power losses. Built-in protection features protect both, the gate driver as well as the power semiconductors.

Typical applications are all kind of chargers and power inverters including on-board and off-board chargers for electrical vehicles as shown in the illustration as one example out of many.

IX4352NE Single Channel Gate Drivers

IX4352NE are designed specifically to drive SiC MOSFETs and high-power IGBTs. Separate 9A source and sink outputs allow for tailored turn-on and turn-off timing while minimizing switching losses. An internal negative charge regulator provides a selectable negative gate drive bias for improved dV/dt immunity and faster turn-off.

Desaturation detection circuitry senses an overcurrent condition of the SiC MOSFET or IGBT and initiates a soft turn-off, thus preventing a potentially damaging dv/dt event. The non-inverting logic input, IN, is TTL and CMOS compatible; internal level shifters provide the necessary bias to accommodate negative gate drive bias voltages. Additional protection features include UVLO detection and thermal shutdown. An open drain FAULT output signals a fault condition to the microcontroller.

Both drivers are rated for an operational temperature range of -40°C to $+125^{\circ}\text{C}$ and are available in a thermally enhanced 16-pin narrow SOIC package.

Features & Benefits

- Separate 9A peak source and sink outputs
- V_{DD} input supply voltage range: +13V to +25V
- Adjustable gate drive voltage range: -10V to +25V
- Internal logic level shifters
- Desaturation detection with soft shutdown sink driver
- Under Voltage Lockout (UVLO)
- Thermal shutdown
- Open drain FAULT output
- TTL and CMOS compatible input

Applications

- Driving SiC MOSFETs and IGBTs
- On-board charger and DC charging station
- AC/DC and DC/DC converters
- Industrial power inverters
- Motor controllers
- Industrial power inverters

High-Side and Low-Side Gate Driver ICs

High-side and low-side drivers control two N-Channel MOSFETs or IGBTs in fast switching applications. The gate driver converts PWM input signals into gate signals compatible with MOSFETs or IGBTs, providing a robust and efficient power semiconductor control. An integrated bootstrap circuit generates a floating voltage that enables the high-side driver to operate up to 600V_{DC}.

The drivers accept wide V_{DD} supply voltage as well as wide logic input voltage ranges. Various built-in protection features ensure the safe operation of the driver and the driven power semiconductors.

Features & Benefits

- High-side operation up to 600V_{DC}
- Outputs tolerant to negative transients
- Supply voltage range: 10V to 20V
- Logic input voltage range: 3.3V to 20V
- Fixed or programmable deadtime
- Cycle-by-cycle edge-triggered shutdown circuitry
- Under Voltage Lockout (UVLO)
- Operating temperature range: -40 °C to +125 °C

Applications

- DC-DC Converters
- AC-DC Inverters
- Motor Controls
 - Servo Motor Control
 - Pumps and Fans
- Class-D Power Amplifiers
- Uninterruptable Power Supplies (UPS)
- Welding
- Induction Cooking

3-Phase Half-Bridge Gate Driver ICs

Switching three pairs of N-Channel MOSFETs or IGBTs in 6-pack configurations is challenging in fast switching applications. 3-phase gate drivers convert PWM input signals into gate signals compatible to MOSFETs or IGBTs, providing robust and efficient power semiconductor control. Integrated bootstrap circuits generate floating voltages, enabling the three high-side drivers to operate up to 600 V_{DC}. The drivers accept wide V_{DD} supply voltage as well as wide logic input voltage ranges. Various built-in protection features ensure the safe operation of the driver and the driven power semiconductors.

Features & Benefits

IX3407B Isolated Driver

The IX3407B is a galvanically isolated, single-channel gate driver that provides a typical 7 A peak source and sink output current on separate output pins. Galvanic input to output isolation is provided by isolation technique where low voltage transmitter die and high voltage receiver die are isolated by integrated high voltage capacitors. Logic inputs tolerant to input voltages up to V_{CC} employ TTL voltage thresholds to support a wide range of control logic devices powered by as low as 3.3 V. Protection is provided for both the input and output sides by Under Voltage Lockout (UVLO) circuitry. Additionally, an active shutdown feature protects the power transistor by pulling OUT– low in the event of an output side voltage supply loss.

Features

- Drives IGBTs, MOSFETs and SiC MOSFETs
- Separate Source and Sink Outputs
- Source and Sink typical 7 A peak Current
- 3.1 V to 17 V Input Side Operating Voltage Range
- 13 V to 35 V Output Side Operating Voltage Range
- Under Voltage Lockout (UVLO)
- 2500 V_{RMS} Input to Output Isolation

- AC and Brushless DC Motor Drives
- High Voltage DC/DC Converters and DC/AC Inverters
- Induction Heating Resonant Applications
- UPS Systems
- Welders
- Solar Inverters

Linear Optocouplers

Littelfuse linear optocouplers feature an infrared LED optically coupled with two photodiodes. One feedback (input) photodiode is used to generate a control signal that provides a servomechanism to the LED drive current, thus compensating for the LED's nonlinear time and temperature characteristics. The other (output) photodiode provides an output signal that is linear with respect to the servo LED current. The devices feature wide bandwidth, high input-to-output isolation, and excellent servo linearity.

Features & Benefits

- Couples analog & digital signals
- 3750 V_{RMS} input-to-output isolation
- 200 kHz bandwidth in photoconductive mode
- 40 kHz bandwidth in photovoltaic mode
- High gain stability
- Low input-to-output capacitance
- Low power consumption
- 0.01 % servo linearity
- THD 87 dB typical

Applications

- Power supply feedback voltage/current
- Industrial and medical sensors
- Isolation of process control transducers
- Isolated 4–20 mA converters

Optocouplers Series

Optocouplers provide an optically means of switching control circuits. Each package contains a phototransistor that is optically coupled with a LED. A shunt resistor can be used to adjust the threshold current required to activate the output circuitry.

Optocouplers are ideal for Telecom, Industrial Control and instrumentation circuits, where electrical isolation of control circuitry is crucial.

Features & Benefits

- Low Input Control Current
- High Current Transfer Ratio (CTR)
- Provides galvanic input to output isolation

N-Channel Depletion Mode MOSFETs

Our N-channel depletion mode field effect transistors (FETs) utilize a proprietary third-generation vertical DMOS process. This third-generation process realizes world-class, high-voltage MOSFET performance in an economical silicon gate process. This process also yields a robust device for low-power applications with high input impedance. These highly reliable FET devices have been used extensively in our solid state relays for industrial and telecommunications applications. These “normally on” MOSFETs are well suited for low-cost, pre-regulator applications that are tolerant of high voltage drops and power dissipation between the power source and the output regulator stage.

RF MOSFETs

The DE150 MOSFET series consists of 500 V & 1000 V, N-channel, enhancement-mode MOSFETs.

With high input impedance and a low maximum on-resistance of 1.5 Ω and 9.4 Ω . The DE150 offers high power output in a small package with low-input drive requirements. Low-input capacitance and low-gate charge enable operation at full power up to 100 MHz.

The DE150 series MOSFETs are available in a flat, 6-lead SMD power package incorporates an electrically isolated bottom-side pad that enables efficient heat sinking.

Features

- 500 V and 1000 V breakdown voltages
- 1.5 Ω and 9.4 Ω maximum on-resistance
- V_{GS} : 2.5 V to 4.5 V
- $T_{vj(max.)}$: 125 $^{\circ}C$
- High input impedance
- Electrically isolated substrate
- High isolation voltage (> 2500 V)
 - Excellent thermal transfer
 - Increased temperature and power
 - Littelfuse advanced low Q_g process
 - Low gate charge and capacitances
 - Easier to drive
 - Faster switching
 - Very low insertion inductance (< 2 nH)

Benefits

- High speed switching at frequencies up to 10 MHz
- Easy to mount - no insulators necessary
- High-power density

NCD2400M: Wide Capacitance Range, Non-volatile, Digital Programmable Capacitor

The NCD2400M is a dedicated electronic calibrator for oscillators, with reliable performance at 105 °C as required by OCXO applications. This product can be used in series or shunt configuration, to support a wide variety of tuning circuit topologies. Digitally controlled capacitance trimming information is communicated via a 2-wire (I²C compatible) interface. The calibration value can be stored in the internal, re-programmable, non-volatile memory.

Features & Benefits

- Series and shunt configurations supported:
 - C_{shunt} = 12.5 pF to 194 pF in discrete 355 fF steps
 - C_{series} = 1.7 pF to 194 pF in discrete 376 fF steps
- 512-state digital programmable capacitor
- Operating frequency range of DC to 150 MHz
- Operation at 105 °C
- 2-wire (I²C compatible) serial interface
- EEPROM non-volatile memory
- 2.5V to 5.5V Input Supply voltage range
- (2 × 2) mm DFN-6

Applications

- VCXOs
- Crystal oscillators
- Tunable RF stages
- RFID tags
- Industrial wireless control
- Capacitor sensor trimming

NCD2100: Non-Volatile Digital Programmable Capacitor

The NCD2100 is an EEPROM-based digitally programmable variable capacitor that provides capacitive offset trimming for capacitance sensitive circuits. Programming the non-volatile EEPROM register value or implementing on demand capacitance value changes are easily accomplished by means of the simple two-wire serial bus. To ensure interoperability over a broad array of design environments, the device is rated for operation with supply voltages of 2.5V to 5.5V across the temperature range of -40 °C to +85 °C.

Features & Benefits

- Capacitance range 6.6 pF to 37.553 pF
- 1024 programmable capacitance values
- Operating frequency range 200 kHz to 250 MHz
- Smallest capacity step size: 63 fF
- (2 × 2) mm DFN-6

Applications

- VCXOs
- Crystal oscillators
- Tunable RF stages
- RFID tags
- Industrial wireless control
- Capacitor sensor trimming

CPC9909: High Efficiency, High Brightness Mains-Powered LED Driver

The CPC9909 high-efficiency, high-brightness LED driver is manufactured in a high voltage BCDMOS on SOI process. The wide input operating voltage range from 8V_{DC} to 550V_{DC} enables the device to be used in a broad range of high-brightness LED applications. The device features pulse frequency modulation (PFM) with a constant peak-current control scheme. This regulation scheme is inherently stable, allowing the driver to be operated above 50 % duty cycle without open loop instability or sub-harmonic oscillations. LED dimming can be implemented by applying a small DC voltage to the LD pin, or by applying a low frequency PWM signal to the PWMD pin.

- Features & Benefits**

 - 8 V to 550 V input voltage range
 - Linear or PWM brightness control inputs
 - Drives multiple LEDs in series/parallel
 - >90 % efficiency
 - Stable operation at >50 % duty cycle
 - Regulated LED current
 - Resistor-programmable minimum off-time
 - Drives external power MOSFET, enabling high LED output current applications
 - Buck or boost configuration
- Applications**

 - Flat-panel display RGB backlighting
 - Signage and decorative LED lighting
 - DC/DC or AC/DC LED driver applications

MXHV9910: High Voltage, Mains-Powered LED Driver

The MXHV9910 high-efficiency, high-brightness LED driver is manufactured in a high voltage BCDMOS on SOI process. The wide input operating voltage range from 8V_{DC} to 450V_{DC} enables the device to be used in a broad range of high-brightness LED applications. The MXHV9910 features a fixed-frequency, peak-current control method, which provides an ideal solution for driving multiple LEDs in series and in parallel. LED dimming can be implemented by applying a small DC voltage to the LD pin, or by applying a low frequency PWM signal to the PWMD pin.

- Features & Benefits**

 - 8V to 450V input voltage range
 - >90 % efficiency
 - Drives multiple LEDs in series/parallel combinations
 - Regulated LED drive current
 - Linear or PWM brightness control inputs
 - Resistor-programmable oscillator frequency
- Applications**

 - Signage, decorative LED lighting
 - Flat-panel display RGB backlighting
 - DC & AC/DC LED driver applications

General Purpose Multifunction Products

The OptoMOS® line of Multifunction Products combines a number of discrete, optically isolated functions into a single package. These products mix and match solid state relays, optocouplers, and Darlington transistors to create highly functional circuits in a single, small package. Multifunction devices allow designers to consolidate circuit functions into a single device, thus freeing up valuable board space and reducing component count.

- Features & Benefits**

 - 3750 V_{RMS} input-to-output isolation
 - Multiple functionality in a single package
 - Current limiting (part numbers with "L" suffix)
- Available Multifunction Product Configurations**

- Applications**
- Telecommunication/datacommunication
 - Instrumentation
 - I/O subsystems/electronic switching
 - Medical equipment (patient/equipment isolation)
 - Security

CPC5712

The CPC5712 is a special purpose Voltage Monitor with Detectors integrated circuit that is used in various high-voltage telephony applications such as VoIP gateways and IP-PBXs. The device monitors the TIP/RING potential through a high-impedance divider (resistor isolation) to derive two programmable signal level detects, polarity information, and a scaled representation of the phone line voltages. In use, the resistor divider and the high input impedance of the CPC5712 make the circuit practically undetectable on the line.

The CPC5712 can also be used in non-telephony applications including instrumentation and industrial controls. It is virtually undetectable in use.

Features & Benefits

- Derives two voltage level detects, polarity information, and a scaled, linear representation of the phone line voltages
- 2 independent, programmable level-detectors with programmable hysteresis
- Fixed-level polarity detector with hysteresis
- Differential linear output
- Common-Mode Rejection Ratio (CMRR) >55 dB
- Worldwide telephone network compatibility
- High differential input impedance, very low common-mode input impedance
- Fixed gain, 3V to 5.5V operation
- CMOS logic level output (TTL compatible)

Applications

- Special-purpose “Voltage Monitor with Detectors” integrated circuit used in high voltage telephony applications
- VoIP gateways, IP-PBX, xDSL
- Non-telephony applications include instrumentation and industrial controls; virtually undetectable in use
- TIP/RING monitoring: polarity detection for caller ID, enhanced 911, line-in-use, battery detection, PSTN check

Central Office Line Card Access Switch (LCAS)

The CPC7695 is our third generation of Line Card Access Switches (LCAS). This monolithic 10-pole line card access switch is available in 20-pin and 28-pin SOIC packages. It provides the necessary functions to replace three 2-Form-C electromechanical relays on analog line card or combined voice and data line cards found in central office, access, and PBX equipment. The devices contain solid state switches for tip and ring line break, ringing injection, and test access. The CPC7695 requires only a +5V supply and provides stable start-up conditioning during system power-up and for hot-plug insertion. Once active, the inputs respond to traditional TTL logic levels, enabling the CPC7695 to be used with 3.3 V logic.

Features & Benefits

- Monolithic IC reliability
- Impulse noise reduction
- Low, matched on-resistance
- Built-in ringing zero-cross switching
- Small surface mount SOIC packages
- Ultra-low power consumption of <10.5 mW
- Robust power-cross and lightning surge performance
- Current limiting, thermal shutdown, and SLIC protection

Applications

- PBX systems
- VoIP gateways
- Channel banks
- Pair gain systems
- Central offices (CO)
- Fiber in the loop (FITL)
- Hybrid fiber coax (HFC)
- Digital loop carriers (DLC)
- Digitally added main line (DAML)

Zilog

Zilog is a trusted supplier of highly integrated microcontrollers and solutions for the industrial and consumer markets. Building on its legacy as an acclaimed architect in the microprocessor and microcontroller industry, Zilog has evolved its expertise beyond core silicon to include application specific solutions, industry leading tools and exceptional technical expertise. These capabilities enable embedded designers to achieve rapid time-to-market in areas like white goods, communications, environmental sensing, and motion detection. Zilog’s long history is a testament to its quality centered philosophy focused on the design, manufacture, test and delivery of products ensuring total customer satisfaction.

MCU Products

S3
White Goods, Small Home Appliances, LCD control. Excellent noise immunity and low power.

Z8 Encore!
Industrial Control, power management, battery charging, sensing and control. Highly integrated analog with low power operation. (Fig. 2)

ZMotion™
Motion detection solutions for lighting control, security, IP cameras, video doorbells, HVAC. PIR sensors and lenses, MCU’s, and application S/W. (Fig. 1)

eZ80
Ethernet and Internet Connectivity MCUs for embedded web servers. MCUs, TCP/IP stack, RTO.

Features & Benefits

- Lower Power consumption and Strong noise Immunity
- Up to 24 MHz High performance 8bit CPU
- Up to 64 KB Flash memory 10 K read/write endurance
- Up to 3.75 K RAM
- 128 Byte Non-Volatile Data Storage
- 10/12/14-bit ADC(Analog to Digital Converter) , internal/external reference Single-ended or differential inputs
- 12/8-bit Digital-to-Analog Converter (DAC)
- Integrated LCD driver with blinking and contrast control/Cap-bias mode
- 128-bit Advanced Encryption Standard (AES) encryption/decryption hardware accelerator according to FIPS PUB 197
- Real-Time Clock (RTC) supporting both Counter and Clock modes
- On-Chip Temperature Sensor
- on-chip analog comparators /on-chip, low-power operational amplifiers
- Event System provides communication between peripherals for autonomous triggering
- Full-Speed Universal Serial Bus (USB 2.0) device supporting eight endpoints with integrated USB-PHY
- Various communication interface
- UART supporting LIN/DALI/DMX, I2C,SPI
- Various Timer supporting capture/Compare/PWM
- High precision internal oscillator
- OCD(On-chip debugger)

Applications

- Applications
- Small Home Appliance
- White goods
- Thermostat
- PIR Motion sensing
- Environmental Sensor
 - CO, CO2, ambient light, pressure, temperature
- Proximity detectors
- Wired security panels
- DALI, DMX controller
- Electronic Locks
- Electrical energy usage monitoring
- BLDC motor control

About Littelfuse

Littelfuse is a trusted partner to engineers worldwide who seek our technical expertise to accurately conduct tests and analyze the results.

Our global vision, team, and leadership collectively provide the strategic foundation to deliver innovations that help bolster businesses and align with global megatrends.

Littelfuse offers leading technologies in circuit protection, power control, and sensing. We continue to expand our broad and diverse portfolio of products into adjacent markets including Power Semiconductors, heavy-duty Switches, Magnetic, Optical, Electromechanical, and Temperature Sensors, and products that provide safe control and distribution of electrical power.

Overcurrent Protection

- Fuses
- Resettable Positive Temperature Coefficient (PPTC) Devices

Overvoltage Suppression

- Gas Discharge Tubes (GDTs)
- TVS Diode Arrays
- PLED Series Open LED Protectors
- SIDACTor Protection Thyristors
- PulseGuard® ESD Suppressors
- Switching Thyristors
- TVS Diodes
- Varistors
- Power Control
- TRIACThyristors

Power Semiconductors

- Bipolar Devices
- IGBTs
- MOSFETs
- Silicon Carbide Technology
- High Power Devices
- Discrete and Module Solutions
- Bare Die Devices
- Fully Engineered Subsystems

Integrated Circuits and Solid-State Relays

- High-Voltage ICs
- Solid-State Relays
- Gate Drivers

Electromechanical Switches

- Tactile Switches
- Pushbutton Switches
- Keyswitch Switches
- Snap-Acting Switches
- Slide Switches
- Dip Switches
- Detect Switches
- Navigation Switches
- Toggle Switches
- Rocker Switches
- Switchlock Switches
- Rotary Switches

Global Footprint

At Littelfuse, our mission is to develop innovative circuit protection, power control, and sensing solutions that meet our customers’ unique needs. This customer-focused philosophy has helped us become the top circuit protection brand in the world.

Our industry-leading product portfolio includes reliable circuit protection, power control, and sensing products that are designed for a variety of markets and applications. We have assembled unparalleled expertise and developed a global footprint that puts our facilities close to our customers and target markets. As our global manufacturing and R&D teams objectively recommend the best circuit protection, power control, or sensing solution for each customer application, they form partnerships that will lead to the development of the next generation of advanced products.

Littelfuse provides:

- application expertise
- global support
- operational excellence
- technology innovation
- collaboration
- customer focus

Technical information is only a click away. Littelfuse Technical Resources contains datasheets, product manuals, white papers, application guides, demos, on-line design tools, and more.

General Lab Capabilities

You need to be certain that your products live up to the highest standards for performance, reliability, safety, and regulatory compliance. Working with Littelfuse, you have access to dedicated application engineers who partner with you to provide expert design consultation, perform comprehensive tests simulating the harshest environments, and confidentially evaluate the results in consultation with you.

Testing Capabilities

Environmental

- Autoclave
- Dust
- H3TRB
- HAST
- High- & Low Temperature Storage
- High-Temperature Loading
- Ingress Protection (IP)
- HTGB
- HTRB
- Temperature & Humidity
- Temperature Cycling
- Thermal Shock
- Salt Fog

Physical-Mechanical Characteristics

- Acceleration
- Die Shear
- Leak Detection
- Mechanical Shock
- Resistance to Soldering Heat (Dip, Reflow, Wave)
- Resistance to Solvents
- Solderability
- Terminal Strength (Push, Pull, Bend)
- Vibration
- Wetting Balance
- Wire Pull

Electrical

- BCI
- Capacitance
- EFT
- ESD
- Impedance
- Insulation Resistance
- I-V
- Life
- Lightning Surge
- Overload
- Parametric Tests
- Power-Cross
- Power Cycling
- Ring Wave
- R-T
- S-Parameter Measurements (Insertion Loss, Isolation, Reflection)
- Short Circuit
- Step Current
- Surface Resistivity
- Surge
- TDR (Eye Diagram)
- Telecom
- Thermal Cut-Off
- Time-to-Trip
- TLP
- Transient
- Trip Cycle
- Trip Endurance
- Voltage Drop
