

| Parameter           | Rating | Units                |
|---------------------|--------|----------------------|
| Blocking Voltage    | 600    | $V_P$                |
| Load Current        | 90     | $mA_{rms} / mA_{DC}$ |
| On-Resistance (max) | 50     | $\Omega$             |

### Features

- 5000V<sub>rms</sub> Input/Output Isolation
- 600V<sub>P</sub> Blocking Voltage
- 100% Solid State
- Low Drive Power Requirements
- Arc-Free With No Snubbing Circuits
- No EMI/RFI Generation
- Small 4-Pin Package

### Applications

- Instrumentation
  - Multiplexers
  - Data Acquisition
  - Electronic Switching
  - I/O Subsystems
- Meters (Watt-Hour, Water, Gas)
- Medical Equipment—Patient/Equipment Isolation
- Security
- Aerospace
- Industrial Controls

### Description

The CPC1393G is a single-pole, normally open (1-Form-A) Solid State Relay with an enhanced input to output isolation barrier of 5000V<sub>rms</sub>.

The relay output is constructed with efficient MOSFET switches that use IXYS Integrated Circuits Division's patented OptoMOS architecture. The input, a highly efficient infrared LED, controls the optically coupled output.

### Approvals

- UL Certified Component: File E76270
- CSA Certified Component: Certificate 1172007
- EN/IEC 60950-1 Certified Component:  
TUV Certificate B 13 12 82667 003

### Ordering Information

| Part Number | Description                     |
|-------------|---------------------------------|
| CPC1393G    | 4-Pin DIP (100/Tube)            |
| CPC1393GV   | 4-Pin DIP V-Bend (100/Tube)     |
| CPC1393GR   | 4-Pin Surface Mount (100/Tube)  |
| CPC1393GRTR | 4-Pin Surface Mount (1000/Reel) |

### Pin Configuration

### Switching Characteristics of Normally Open Devices

## Absolute Maximum Ratings @ 25°C

| Parameter                              | Ratings     | Units            |
|----------------------------------------|-------------|------------------|
| Peak Blocking Voltage                  | 600         | V <sub>P</sub>   |
| Reverse Input Voltage                  | 5           | V                |
| Input Control Current                  | 50          | mA               |
| Peak (10ms)                            | 1           | A                |
| Input Power Dissipation <sup>1</sup>   | 100         | mW               |
| Total Package Dissipation <sup>2</sup> | 550         | mW               |
| Isolation Voltage, Input to Output     | 5000        | V <sub>rms</sub> |
| Operational Temperature                | -40 to +85  | °C               |
| Storage Temperature                    | -40 to +125 | °C               |

<sup>1</sup> Derate linearly 1.33mW / °C

<sup>2</sup> Derate linearly 3mW / °C

Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at conditions beyond those indicated in the operational sections of this data sheet is not implied.

Typical values are characteristic of the device at +25°C, and are the result of engineering evaluations. They are provided for information purposes only, and are not part of the manufacturing testing requirements.

## Electrical Characteristics @ 25°C

| Parameters                          | Conditions                                                       | Symbol            | Min | Typ  | Max  | Units                                |

## Manufacturing Information

### Moisture Sensitivity

All plastic encapsulated semiconductor packages are susceptible to moisture ingress. IXYS Integrated Circuits Division classified all of its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, **IPC/JEDEC J-STD-020**, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a **Moisture Sensitivity Level (MSL) rating** as shown below, and should be handled according to the requirements of the latest version of the joint industry standard **IPC/JEDEC J-STD-033**.

| Device               | Moisture Sensitivity Level (MSL) Rating |
|----------------------|-----------------------------------------|
| CPC1393G / CPC1393GV | MSL 1                                   |
| CPC1393GR            | MSL 3                                   |

### ESD Sensitivity

This product is **ESD Sensitive**, and should be handled according to the industry standard **JESD-625**.

### Soldering Profile

Provided in the table below is the Classification Temperature ( $T_C$ ) of this product and the maximum dwell time the body temperature of this device may be above ( $T_C - 5$ )°C. The classification temperature sets the Maximum Body Temperature allowed for this device during lead-free reflow processes. Additionally, for the CPC1393GR, the solder reflow profile given in Technical Brief TB-200 "**Pb-Free Solder Reflow Profile for Select Devices**" must be followed. For the through-hole devices, CPC1393G and CPC1393GV, and any other processes, the guidelines of **J-STD-020** must be observed.

| Device    | Maximum Body Temperature ( $T_C$ ) | Time       |
|-----------|------------------------------------|------------|
| CPC1393GR | 250°C                              | 15 seconds |

### Board Wash

IXYS Integrated Circuits Division recommends the use of no-clean flux formulations. Board washing to reduce or remove flux residue following the solder reflow process is acceptable provided proper precautions are taken to prevent damage to the device. These precautions include, but are not limited to: using a low pressure wash and providing a follow-up bake cycle sufficient to remove any moisture trapped within the device due to the washing process. Due to the variability of the wash parameters used to clean the board, determination of the bake temperature and duration necessary to remove the moisture trapped within the package is the responsibility of the user (assembler). Cleaning or drying methods that employ ultrasonic energy may damage the device, and should not be used. Additionally, the device must not be exposed to flux or solvents that are Chlorine- or Fluorine-based.
