

Sx02xSx EV Series

1.5 A Sensitive SCRs

HF RoHS

Description:

The 1.5 A sensitive gate SCR component series offers high static dv/dt and low turn-off time (t_q). All SCR junctions are glass-passivated to ensure long term reliability and parametric stability.

Features:

- RoHS compliant and halogen-free
- Through-hole and surface mount packages
- Blocking voltage (V_{DRM} / V_{RRM}) capability up to 600 V
- High dv/dt noise immunity
- Surge current capability > 15 A
- Improved turn-off time (t_q) < 35 μ s
- Sensitive gate for direct microprocessor interface

Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
