PolySwitch® Resettable PPTCs
Battery Strap > SRP Series

Description
Littelfuse PolySwitch, a pioneer of polymeric positive temperature coefficient (PPTC) resettable devices, offers several material platforms to help protect battery applications. The high trip temperature, broad range of hold current ratings, and highest voltage ratings available, combined with automotive qualifications are a unique combination for the SRP series.

Features & Benefits
- Qualified to AEC-Q200 for automotive applications
- Current ratings from 1.2A to 4.2A
- Voltage ratings from 15V to 20V
- Fast time-to-trip
- Low-resistance devices increase battery operating time
- RoHS compliant and Halogen free
- Compatible with high-volume electronics assembly
- UL Recognized to UL 1434
- CSA Certified to CSA TIL No. CA-3A
- TUV Certified to EN 60730-1

Applications
- Rechargeable batteries for mobile devices
- E-call systems
- Vacuum cleaner
- Power tools
- Portable medical devices

*Product electrical characteristics determined at 25°C.*

**Notes**

- I_H: Hold current: maximum current device will pass without interruption in 20°C still air unless otherwise specified.
- I_T: Trip current: minimum current that will switch the device from low resistance to high resistance in 20°C still air unless otherwise specified.
- V_MAX: Maximum voltage device can withstand without damage at rated current.
- I_MAX: Maximum fault current device can withstand without damage at rated voltage.
- P_D: Power dissipated from device when in the tripped state in 20°C still air unless otherwise specified.
- R_MIN: Minimum resistance of device supplied at 20°C unless otherwise specified.
- R_MAX: Maximum resistance of device supplied at 20°C unless otherwise specified.
- R_{1MAX}: Maximum resistance, measured at 20°C unless otherwise specified, of device one hour after being tripped the first time.

Part Naming System

**SRP 120 F**

**Modifier**
- **D** = Short Leaded Strap
- **F** = Lead-free Version
- **H** = Hole Punched in Lead
- **L** = Long Lead or Leads
- **S** = Slit Lead
- **SS** = Both Leads Slit
- **U** = Untaped
- **-T/N** = Tin plating lead

**Hold Current Indicator**

**Product Series**

**Physical Characteristics and Environmental Specifications**

**Physical Characteristics**
- **Lead Material:** 0.125mm Nominal Thickness, Quarter-hard Nickel
- **Tape Material:** Polyester

**Environmental Specifications**
- **Test**
  - **Conditions**
  - **Resistance Change**
  - **Passive Aging** 70°C, 1000 hrs ±10% typ
  - **Humidity Aging** 85°C/85% RH, 7 Days ±5% typ
  - **Vibration** MIL-STD-883C, Test Condition A No Change

**Notes**
- Storage conditions: 40°C max., 70% RH max.; devices should remain in original sealed bags prior to use.
- Devices may not meet specified values if these storage conditions are exceeded.

Installation Guidelines for the Strap Family

- PPTC devices operate by thermal expansion of the conductive polymer. If devices are placed under pressure or installed in spaces that would prevent thermal expansion, they may not properly protect against damage caused by fault conditions. Designs must be selected in such a manner that adequate space is maintained over the life of the product.

- Twisting, bending, or placing the PPTC device in tension will decrease the ability of the device to protect against damage caused by electrical faults. No residual force should remain on device after installation. Mechanical damage to the PPTC device may affect device performance and should be avoided.

- Chemical contamination of PPTC devices should be avoided. Certain greases, solvents, hydraulic fluids, fuels, industrial cleaning agents, volatile components of adhesives, silicones, and electrolytes can have an adverse effect on device performance.

- PPTC strap devices are intended to be resistance welded to battery cells or to pack interconnect straps, yet some precautions must be taken when doing so. In order for the PPTC device to exhibit its specified performance, weld placement should be a minimum of 2mm from the edge of the PPTC device, weld splatter must not touch the PPTC device, and welding conditions must not heat the PPTC device above its maximum operating temperature.

- PPTC strap devices are not intended for applications where reflow onto flex circuits or rigid circuit boards is required.

- The polyester tape on PPTC strap devices is intended for marking and identification purposes only, not for electrical insulation.
