Peak Reverse Gate Voltage, ($T_C = 93^\circ\text{C}$, Pulse Width $\leq 1.0\text{ }\mu\text{s}$)	V_{RGM}	6.0	V
Operating Junction Temperature Range	T_J	–40 to +110	$^\circ\text{C}$
Storage Temperature Range	T_{stg}	–40 to +150	$^\circ\text{C}$
Mounting Torque	–	6.0	in. lb.

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

- V_{DRM} and V_{RRM} for all types can be applied on a continuous basis. Ratings apply for zero or negative gate voltage; however, positive gate voltage shall not be applied concurrent with negative potential on the anode. Blocking voltages shall not be tested with a constant current source such that the voltage ratings of the devices are exceeded.
- Torque rating applies with use of compression washer (B52200-F006 or equivalent). Mounting torque in excess of 6 in. lb. does not appreciably lower case-to-sink thermal resistance. Anode lead and heatsink contact pad are common. (See AN209B). For soldering purposes (either terminal connection or device mounting), soldering temperatures shall not exceed $+200^\circ\text{C}$. For optimum results, an activated flux (oxide removing) is recommended.
