Description

This 30 A/35 A high temperature Alternistor TRIAC has 150°C maximum junction temperature and 350 A I_{TSM} (60 Hz). This series enables easier thermal management and higher surge handling capability in AC power control applications such as heater control, motor speed control, lighting controls, and static switching relays. Alternistor TRIAC operates in Quadrants I, II, and III and offers high performance in applications requiring high commutation capability.

Features

- Voltage capability up to 800 V
- Mechanically and thermally robust TO-220 clip-attach assembly
- Surge capability of 350 A at 60 Hz half cycle
- High T_{VJ} of 150°C
- L package UL recognized under E71639 for Electrical isolated at 2500 V_{RMS}
- Halogen free and RoHS compliant

Applications

TRIAC is an excellent AC switch in applications such as heating, lighting, and motor speed controls.

Typical applications include:

- Heater control such as coffee brewer, tankless water heater and infrared heater
- AC solid-state relays
- Light dimmers including incandescent and LED lighting
- Motor speed control in kitchen appliances, power tools, home/brow/white goods and light industrial applications as compressor motor control

Alternistor TRIAC is used with high inductive loads requiring high commutation capability. Internally isolated packages offer better heat sinking with higher isolation voltage.

Product Summary

Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
