Description

ITV5432 Series is a chip type surface mountable device that can protect against both overcurrent and overcharging. It comprises a fuse element to ensure stable operation under normal electrical current and to cut off the current when overcurrent occurs. It also comprises a resistive heating element that could be used in combination with a voltage detecting means, such as IC and FET. When overvoltage is detected, the heating element is electrically excited to generate heat to blow the fuse element to achieve overvoltage protection.

Features

- Halogen Free
- Surface Mount
- Fast response
- Protection for both overcurrent and overcharging

Applications

- Vacuum cleaner
- Power tools
- E-scooter
- E-bike
- UPS

</table>

Current Capacity

- 100% x I_{rated}
- No Melting

Cut Time

- 200% x I_{rated}
- < 1 min

Interruption Current

- 100 A, power on 5 ms, power off 995 ms, 10000 cycles
- No Melting

Over Voltage Operation

- In operation voltage range, the fusing time is < 1 min.

Notes:

- I_{rated} = Current carrying capacity that is measured at 40°C thermal equilibrium condition
- V_{max} = Maximum voltage that can be cut off by fuse
- V_{OP} = Range of operation voltage
- R_{heater} = The resistance of the heating element
- R_{fuse} = The resistance of the fuse element
- Cells in series = Number of battery cells connected in series in the circuit for ITV device to protect.

---

- All temperature refer to topside of the package, measured on the package body surface
- If reflow temperature exceeds the recommended profile, devices may not meet the performance requirements
## Installation and Handling Guidelines

- Before and after mounted, the ultrasonic-cleaning or immersion-cleaning must not be done to ITV device. The flux on element would flow, and it would not be satisfied its specification when cleaning is done. In addition, a similar influence happens when the product comes in contact with cleaning solution. These products after cleaning will not be guaranteed.

- Silicone-based oils, oils, solvents, gels, electrolytes, fuels, acids, and similar will adversely affect the properties of ITV devices, and shall not be used or applied.

- Please DO NOT reuse the ITV device removed by the soldering process.

- ITV devices are secondary protection devices and are used solely for sporadic, accidental overcurrent or overtemperature error condition, and shall NOT be used if or when constant or repeated fault conditions (such fault conditions may be caused by, among others, incorrect pin-connection of a connector) or over-extensive trip events may occur.

- Operation over the maximum rating or other forms of improper use may cause failure, arcing, flame and/or other damage to the ITV devices.

- The performance of ITV devices will be adversely affected if they are improperly used under electronic, thermal and/or mechanical procedures and/or conditions non-conformant to those recommended by manufacturer.

- Customers shall be responsible for determining whether it is necessary to have back-up, failsafe and/or fool-proof protection to avoid or minimize damage that may result from extra-ordinary, irregular function or failure of ITV devices.

- There should be minimum of 0.1mm spacing between ITV and surrounding compounds, to maintain the product characteristics and avoid damage other surrounding compounds.

- This product is designed and manufactured only for general-use of electronics devices. We do not recommend that it is used for the applications military, medical and so on which may cause direct damages on life, bodies or properties.
